Q: Question

Can I see minimum force (N) in the Pulse Force graph?

A: Answer

The Force (N) itself is very user-dependent. A short, strong push or a long, soft push on the door could result in similar closing energy but a completely different minimum force.

$$50 \text{ N} \times 0.1\text{m} = 5\text{J} = 25\text{N} \times 0.2\text{m}$$
