

PLS

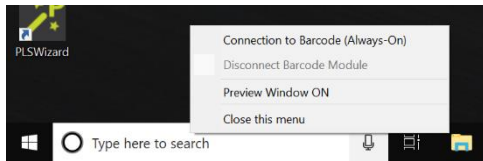

INSTALLATION/SOFTWARE/USAGE

Q: Question

How does the barcode scanner on Panasonic Toughpad tablets start and stop and how is it used?

A: Answer

To open the barcode emulator utility, find the Panasonic Folder in the Windows Start Menu and select the 2D Barcode Key Emulator program. The program will come up if it is searched for in the start menu. Typing 2D or Barcode will bring up the program in the search.

When the program is selected it will bring up this selection window. Select the “Connection to Barcode (Always On)” option to turn on the scanner. When this option is selected the scanner on top of the tablet should turn on and will be ready to scan.

While the scanner is turned on the “Disconnect Barcode Module” option will be available when menu is opened. Select that option to turn off the scanner.

To scan a barcode into PLS, tap on the Manual VIN entry box to focus the object with the cursor ready for input. Scan the barcode with the scanner. A VIN should enter the box and a new vehicle should be created.
